

HRITIK VIJAY

Security Engineer

+91 8700388609 | hire@hritik.sh | hritik.sh | github.com/hritik14

SUMMARY

Security engineer with hands-on experience building and scaling DevSecOps programs, securing cloud-native infrastructure, and performing deep code-level security reviews across Python, Java, and Go services. Track record of designing application security posture management platforms, hardening CI/CD pipelines against supply chain attacks, and mentoring engineering teams on secure development practices. Active open-source contributor to supply chain security tooling. Passionate about AI safety and building trustworthy, interpretable AI systems.

EXPERIENCE

Sr. Product Security Engineer June 2022 – Present

Dreamplug Technologies Pvt Ltd (CRED) Bangalore, India

- Architected and led the DevSecOps charter across 1,800+ repositories, implementing custom SAST detections, automated alerting pipelines, and supply chain vulnerability scanning at scale.
- Built and owned the organization's primary Application Security Posture Management (ASPM) platform, providing centralized visibility into security risk across all services and infrastructure.
- Designed and hardened CI/CD pipelines with dependency verification, signed attestations, and automated policy enforcement to mitigate supply chain attack vectors.
- Performed in-depth source code security reviews for backend services in Python, Java, and Golang, identifying critical vulnerabilities before production deployment.
- Led cross-functional learning sessions on enterprise Java security, supply chain security, and AI security, mentoring engineers across product and platform teams.
- Drove secure cloud infrastructure practices including network segmentation, access control policies, and container security hardening on AWS.

Package Maintainer October 2021 – Present

AboutCode / VulnerableCode (Open Source) Remote

- Maintain and develop VulnerableCode, an open-source vulnerability scanning and remediation tool used as an industry reference for software composition analysis (SCA).
- Contribute to ecosystem-defining projects including PackageURL and Univers, which are becoming industry standards for supply chain security identification and versioning.
- Collaborate with a global community of contributors on security data ingestion from advisories worldwide, improving coverage and accuracy.

Software Development Engineer October 2021 – May 2022

Wavicle Technologies / LimeChat Bangalore, India

- Developed and managed real-time chatbot automations deployed on AWS EKS Kubernetes clusters, gaining hands-on experience with container orchestration, networking, and cloud infrastructure at scale.
- Maintained service reliability through detailed root cause analyses, Infrastructure-as-Code practices, and proactive monitoring using Python, PostgreSQL, and Bash.

Cyber Security Trainer June 2019 – November 2019

Coding Liquids

- Designed and delivered a structured cybersecurity curriculum to 100+ students covering web application attacks (CSRF, IDOR, CORS, CSP bypass) and penetration testing with Metasploit.

OPEN SOURCE & PROGRAMS

Python Developer – Google Summer of Code June 2021 – August 2021

AboutCode / VulnerableCode Remote

- Refactored the project's core engine for significant performance improvements in Python/Django; maintained CI pipelines (GitHub Actions, Travis CI) and improved Docker container builds.
- Integrated multiple global security advisory data sources and authored project documentation deployed on Read the Docs.

Open Source Contributions

Active contributor to The Linux Kernel, scancode.io, rclone, Kong (Golang), and changedetection.io. Contributions span security patches, performance improvements, and feature development.

TECHNICAL SKILLS

Languages:Python, Golang, Java, TypeScript, Lua, Bash, SQL, C (AVR/embedded)

Security:SAST, SCA, ASPM, Threat Modeling, Penetration Testing, Code Review, OWASP

Cloud & Infra:AWS, Kubernetes (EKS), Docker, CI/CD (GitHub Actions, Travis CI, GitOps)

Tools:Burp Suite, Wireshark, Metasploit, Git, Linux Administration, eBPF

Frameworks:Django, Laravel, CodeIgniter; DNS (BIND, dnsmasq); IoT/embedded (Arduino, ESP)

NOTABLE PROJECTS & RESEARCH

- DNS Rebinding Toolkit – Built an attack toolkit capable of infiltrating internal networks by bypassing NAT restrictions; presented findings at BSides Noida.
- KernInject – Created a bootable USB tool that installs a kernel module to an unencrypted kernel on boot, demonstrating partial disk encryption bypass techniques.
- USB Rubber Ducky – Developed a HID-based attack automation device using Arduino/ATTiny85, replicating Hak5 capabilities for security testing.
- Poppy Vulnerable Websites – Built a series of intentionally vulnerable web applications (Brute Force, CSRF, LFI, SQLi, XSS, RCE) with custom exploit tooling for security training.

ACHIEVEMENTS

- CVE-2026-22776 (GHSA-h934-98h4-j43q) – Discovered a high-severity Denial of Service vulnerability in cpp-httplib via zip bomb decompression (CVSS 8.7); unsafe handling of compressed HTTP request bodies allowed attackers to exhaust server memory.
- CVE-2026-21428 (GHSA-wpc6-j37r-jcx7) – Discovered a CRLF injection vulnerability in cpp-httplib enabling HTTP header injection and SSRF attacks via unsanitized headers combined with HTTP/1.1 pipelining.
- CVE-2020-6862 – Discovered and reported an information disclosure vulnerability in ZTE routers (CVSS Base Score: 7.3); published on Exploit-DB.
- Xen Project Hall of Fame – Recognized for documenting an exploit in the Xen hypervisor.

EDUCATION

Bachelor of Technology – Computer Science 2018 – 2022
